

Evaluation Team Minutes – April 15, 2009

Fall Protection Sub-Committee

Discussion:

1. It was agreed that the content should drive the evaluation. Until the content has been fleshed out it is difficult to determine the appropriate number/type of questions required for learner verification.
2. The team discussed whether the IEC would be responsible for aligning any statistical information with the evaluations. Will follow up at general meeting.
3. The team thought that it should be possible to have trainees utilize the Green Book to find an answer to a specific question – wouldn't necessarily require a copy of the book for everyone.
4. The team agreed, as Ron proposed, that a form and checklist is required (similar to what IOL uses) for equipment inspection and donning and doffing.
5. It was agreed that a conversion chart for applicable heights and weights needed to be included with the training material.
6. Because of a lack of legislation around the use of portable ladders at heights over 10 feet the team was unsure how to address this objective. Further investigation/discussion required.
7. It was felt that some "fill in the blanks" type of questions along with the previously suggested methods would be a good way of determining whether trainees are really absorbing the material.
